## TREDJE BANDETS INNEHÅLL

|                                                                                                                                                                                      | Sid.    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| 1. BERGSTRÖM, S. M., Conodonts from the Ludibundus Limestone (Middle Ordovician) of the Tvären area (S.E. Sweden) . . . . .                                                          | 1- 64   |
| 2. VON ECKERMANN, H., Contributions to the knowledge of the alkaline dikes of the Alnö region. IV . . . . .                                                                          | 65- 68  |
| 3. WICKMAN, F. E., The distribution pattern of land and water . . . . .                                                                                                              | 69- 98  |
| 4. GEIJER, P., The geological significance of the cerium mineral occurrences of the Bastnäs type in Central Sweden . . . . .                                                         | 99-105  |
| 5. WICKMAN, F. E., One the distribution of different kinds of geological deposits in a glaciated region . . . . .                                                                    | 107-129 |
| 6. WICKMAN, F. E., The amount of material necessary for a trace element analysis . . . . .                                                                                           | 131-139 |
| 7. GABRIELSON, O., The crystal structures of kentrolite and melanotekite . . . . .                                                                                                   | 141-151 |
| 8. GEIJER, P., On the association of magnesium and sulphide ores in metasomatic mineralization . . . . .                                                                             | 153-164 |
| 9. GEIJER, P., Some aspects of phosphorus in Precambrian sedimentation . . . . .                                                                                                     | 165-186 |
| 10. LUNDQVIST, T., Ferroan-aluminian anthophyllite from the northern archipelago of Stockholm, Sweden . . . . .                                                                      | 187-192 |
| 11. WICKMAN, F. E., BLOMQVIST, N. G., GEIJER, P., PARWEL, A., VON UBISCH, H., and WELIN, E., Isotopic constitution of ore lead in Sweden . . . . .                                   | 193-257 |
| 12. VON ECKERMANN, H., Contributions to the knowledge of the alkaline dikes of the Alnö region. V-VIII . . . . .                                                                     | 259-275 |
| 13. WELIN, E., and UYTENBOGAARDT, W., Notes on the mineralogy of Sweden. 3. A davidite-thorite paragenesis on the island of Björkö, north of Västervik, Sweden . . . . .             | 277-292 |
| 14. SUNDIUS, N., Rhodochrosite from Långban . . . . .                                                                                                                                | 293-295 |
| 15. MELLIS, O., Mineralogische Untersuchungen an Granaten aus in Schweden gefundenen Schmuckgegenständen der Merowinger- und Karolingerzeit . . . . .                                | 297-362 |
| 16. WICKMAN, F. E., and EL-HINNAWI, E. E., The time distribution of lava-fragment ejection from volcanoes . . . . .                                                                  | 363-383 |
| 17. HENRIQUES, Å., Ferriferous Rutile and Ferriferous Cassiterite . . . . .                                                                                                          | 385-394 |
| 18. HENRIQUES, Å., Sjögruvite (= Arseniopleite) . . . . .                                                                                                                            | 395     |
| 19. VON ECKERMANN, H., Contributions to the knowledge of the alkaline dikes of the Alnö region. IX. Carbonatitic Kimberlite from Sundsvall . . . . .                                 | 397-402 |
| 20. VON ECKERMANN, H., Contributions to the knowledge of the alkaline dikes of the Alnö region. X. Carbonatite rich in apatite and quartz from Vintjärns Varv at Sundswall . . . . . | 403-406 |
| 21. SUNDIUS, N., Benstonite and tephroite from Långban . . . . .                                                                                                                     | 407-411 |
| 22. GEIJER, P., and GABRIELSON, O., Three discredited mineral species: gersbyite, munkforssite and munkrudite . . . . .                                                              | 413-414 |
| 23. GEIJER, P., On the source of chromium in micas . . . . .                                                                                                                         | 415-422 |
| 24. GEIJER, P., Genetic relationships of the paragenesis $Al_2SiO_5$ -lazulite-rutile . . . . .                                                                                      | 423-464 |
| 25. GEIJER, P., The supposed meteorite fall at Karlstad ("Carlstadt") in Sweden, 1822 . . . . .                                                                                      | 465-466 |

|                                                                                                                     |         |
|---------------------------------------------------------------------------------------------------------------------|---------|
| 26. WICKMAN, F. E., The Muonionalusta iron meteorites . . . . .                                                     | 467-478 |
| 27. VON ECKERMANN, H., Distribution of radioactivity in minerals and rocks<br>of the Alnö alkaline area . . . . .   | 479-488 |
| 28. SOOT-RYEN, H., Nuculoid pelecypods from the Silurian of Gotland . . .                                           | 489-520 |
| 29. VON ECKERMANN, H., Contributions to the knowledge of the alkaline dikes<br>of the Alnö region. XI—XII . . . . . | 521-535 |
| 30. GABRIELSON, O., and GEIJER, P., The mineral attakolite . . . . .                                                | 537-543 |
| 31. BOSTRÖM, K., Some aspects of the analysis of mineral forming conditions                                         | 545-572 |
| 32. BOSTRÖM, K., The occurrence of senarmontite, stolzite, cuprite, and brand-<br>tite at Långban . . . . .         | 573-576 |
